

FLOW EZY FILTERS, INC.

WHY BUY OUR FILTERS?

Performance Filters

Over 70 years experience in the manufacture of filters.

We are a filter company and that's all we make are filters. Our competitors can't make that claim. In fact many of our competitors do not make their filters.

We have proprietary pleating methods to maximize surface area that our competitors do not have.

Our filter housings are manufactured from aircraft grade (T6061) high polished, bright dipped, machined anodized aluminum, and are stronger than any other fuel or oil filter on the market.

Flow Ezy pleated wire cloth filter elements are soldered into the end caps to be virtually compatible with any fluid. Our competitors are epoxied.

All our products are made in the USA. Nothing is made offshore.

We will private label for you. Certain conditions apply.

We have more connection sizes, micron sizes, and connection type options for oil and fuel filtration than any other filter manufacturer in the market.
